

Corona pretreatment heads for foils

Various pretreatment systems are available for different applications. The decisive factor is the material that has to be pretreated and the speed of the pretreatment.

SM-series:

Working widths: 120 - 650 mm
 Speed: 5 - 60 m/min
 Ceramic electrodes: 2 pcs.
 Housing width: 100mm
 Housing height: 120 mm

Suitable for existing roller systems.
 Option: axle clamp bracket

Separate height adjustment and quick-change bracket.
 Integrated fine adjustment of the electrodes.

SMH-series:

Working widths: 120 - 650 mm
 Speed: 5 - 30 m/min
 Ceramic electrodes: 1 pc.
 Housing width: 60mm
 Housing height: 100 mm

Suitable for existing roller systems.

Integrated fine adjustment of the electrodes.

Suitable for narrow installation situations.

Corona pretreatment heads for foils

SH4-series:

Working widths: 210 - 360 mm
Speed: 5 - 60 m/min
Ceramic electrodes: 2 - 4 pcs.
Housing width: 120mm
Housing height: 250 mm

Suitable for existing roller systems.

Foldable bracket with height adjustment.

Also suitable for sheet material when used on slide systems.

KVB-series:

Working widths: 120 - 300 mm
Speed: 5 - 20 m/min
Ceramic electrodes: 1 pc.
Housing width: 40mm
Housing height: 100 mm

Suitable for existing roller systems

Suitable for very narrow installation situations.

Special prevention is required for the high-voltage connection.

TVB-series:

Designed for pipe bracket.

Otherwise the same technical data as the KVB series.
